How To Set Up Euroscope and other tools

1. TOOLS & FILES

1. EuroScope (download the latest beta version)
2. Adria EuroScope Setup files (in this package)
3. Audio For Vatsim
4. vATIS

2. STEPS

- **EUROSCOPE**

If you have Euroscope installed already check if it is the latest beta. If not, uninstall it and delete all previous setup files from your PC. If it is the latest beta skip steps 1,2 and 4.

1. Unpack downloaded Euroscope and place the *EuroScopeBeta32a34* folder in <u>C: Program Files</u>
2. Rename the folder to *Euroscope* (make sure there is only one Euroscope folder)
3. Copy content of the folder you found this PDF into *Documents/Euroscope* (make sure there is only one Euroscope folder)
4. in *C: Program Files/Euroscope* find EuroScope.exe and make a shortcut to the desktop or where ever you want.
5. Run Euroscope
6. In dialogue browse to /Documents/Euroscope and select one out of two .prf files(CTR_APP or TWR), depending on your rating
7. If you get any questions by Euroscope, click Yes.

When closing ES, save all that asked, so ES doesn't ask you the same questions again next time.

- **AUDIO FOR VATSIM**

- Install downloaded AFV
- Run it (update if asked)
- Open settings
- Enter your CID, password
- Select your input and output devices
- Save

- **vATIS**

  - Install downloaded vATIS
  - Run it
  - Select Import and browse to Documents/Euroscope/vATIS
  - Select the JSON profile and import it
  - Double click on the profile
  - In the new window select Settings
  - Enter your info
  - Save settings

TWR & APP can connect one ATIS only. CTR can connect up to 4 ATIS positions

If you need any help, post it in the #support channel on our Discord.

Enjoy!
